

Litter Critters

During winter, a female will attract a number of males to her, they form an Echidna Train. The courtship lasts for up to 6 weeks, then mating occurs once with one male.
www.echidna.edu.au

Pretend you are a hungry Echidna looking for food in the litter!

Look over the surface for things to eat.

Using your beak (tool) scratch up and turn over the litter to find your lunch.

How many critters did you find for your lunch?
