

Healthy Environment

About 1/3rd of Australia's mammals live in trees, directly depending on trees or shrubs for food shelter, roosting and nesting spots

☐  A variety of native plant layers. Groundcovers, Shrubs and Trees.	☐  A variety of native flowering plants To provide nectar and pollen throughout the year	☐  Healthy Soil To provide the environment with a sustainable foundation	☐  Litter, branches, rocks and logs helps keep soil moist and provides homes.
☐  Tree hollows provide safe homes for birds and mammals	☐  A variety of reptiles help control invertebrates and provide food for larger animals	☐  Few feral animals That compete with native species for food and shelter	☐  A variety of insects and spiders to recycle nutrients and provide food for other animals.
☐  Few Weeds Competing with native species for nutrients and space.	☐  Clean water Unclean water can make us all sick, including the plants and animals.	☐  Clean air Pollution affects every thing's health.	☐  Caring Humans Take only photos, leave only footprints.
